- ❖ **Excel navigator**
- ❖ **Create Content sheet**

- *All components are designed for business users, not experts or technologists. But the results will look as there were made by experts.*
- *Regardless your organisation size these set of tools will help you to improve the productivity by spending less time involved in tasks that could be easy automated.*
- *By integrating all components into Excel interface you have access to all features instantly. You don't need to run external application, all components are integrated into Excel menus toolbars. You have fast access to all components without leaving the application; you don't need to work with multiple windows.*
- *The interface is very simple to use, single forms for each component, wizards for complex tasks, most of settings are already set for fast access, settings are stored and could be exported or imported.*

### Product information

#### Exporter HTML

This feature allows user to quickly export ranges from Excel in various formats. In less than a minute the data from your spreadsheets could be transformed into elegant web pages with navigation and links.

Export as web page with images: Export all ranges as pictures and creates a new web page with navigation, scripts links etc. in less than a minute.

Export as web page with flash movies: Export all ranges as pictures, creates automatically the flash movie and the web page with flash movie embedded.

Export as web page with tables and images: Export all ranges as tables and charts as images and creates a new web page with frames, navigation, links or menus etc.

Export as pictures: This will save all selected ranges as individual images. You can customize the format for exported pictures and the size. Also you could create thumbnails for each exported range.

Export as Word or PDF document: This will save the ranges as Microsoft Word or PDF documents

#### Export to Power Point

Allow you to export ranges into a new or existing Power Point presentation in various formats (as image or Excel objects). The export is fully customizable with a lot of options; Export uses Image Magick library for picture processing, assuring excellent quality and low sizes for presentations.

#### Workbook analyzer

A powerful and easy-to-use feature that will help you automate diagnostics, error checking and optimization for important workbooks. This feature will build a complete documentation of your workbook in less than a minute.

Reports include worksheets inventory, workbook analyze, details about formulas and constants, comments, shapes, charts, pivot tables, links and hyperlinks, errors in formulas, validation data and cells with conditional formatting etc. for each worksheet. Also a full code analyze with sections for references, procedures, declarations and components.

#### Worksheet compare

This feature allow user to quickly compare worksheets/ranges from the same or from different workbooks or even from the same worksheet. Comparisons could be done by values or by formulas; could compare various formats parameters like fonts, cells protection, patterns...

#### Create content sheet

Quickly create a new sheet for navigation between workbooks sheets.

#### Excel navigator

Quickly navigate between sheets and workbooks, create new sheets, open or close workbooks, many other features available.

#### Random Generator

Quickly fill ranges with random values; support contiguous or continuous ranges.
